REAL PARTY IN INTEREST

The real party in interest is Assignee INTERNATIONAL BUSINESS MACHINES CORPORATION, by virtue of an assignment executed by the inventors on April 18, 19, and 23, 2001 and filed with the United States Patent and Trademark Office on April 26, 2001, recorded at reel number 011761 frame number 0873.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001

2. RELATED APPEALS AND INTERFERENCES

Appellants and the undersigned attorneys are not aware of any appeals or any interferences which will directly affect or be directly affected by or having a bearing on the Board's decision in the pending appeal.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 5 of 19

3. STATUS OF CLAIMS

Claims 1-18 are currently pending and stand finally rejected as anticipated by "Microsoft Excel."

Claims 1-18 are the claims on appeal. See, Appendix.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 6 of 19

4. STATUS OF AMENDMENTS

A reply under 37 C.F.R. §1.111 was filed on October 4, 2004 and entered into the application. A notice of appeal was filed March 22, 2005 in response to the December 23, 2004 office action.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 7 of 19

5. SUMMARY OF CLAIMED SUBJECT MATTER.

The invention relates to a method for generating metadata objects. See, Specification of United States Patent Application, 09/843,068 at page I, lines 7-8. A metadata object is data for describing data objects. See, Specification of United States Patent Application, 09/843,068 at pages 1-3.

In the inventive method, a spreadsheet including metadata information is displayed and a command is provided to trigger a conversion of the spreadsheet into a comma separated value file.

FIG. 4 reproduced below graphically illustrates an exemplary worksheet 60 including a metadata directive column 63 and a metadata information grid 64. See, Specification of United States Patent Application, 09/843,068 at page 6, lines 10-27.

6. GROUNDS OF REJECTION TO BE REVIEWED ON APPEAL Claims 1-18 were rejected under 35 U.S.C. §102(b) by "Microsoft Excel."

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 10 of 19

7. GROUPING OF CLAIMS

Claims 1-18 stand or fall with claim 1.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 11 of 19

8. ARGUMENTS

A. MS Excel does not disclose metadata

Specifically, during examination, Examiner Campbell must interpret claims 1-18 as broadly as their terms reasonably allow. This means that the terms of claims 1-18 must be given ordinary and customary meaning attributed to them by those having ordinary skill in the art of the present application unless the Appellant has clearly set forth a definition of one or more terms of claims 1-18 that is different than their ordinary and customary meaning in the art. See, MPEP §2111.01.

The Appellant respectfully asserts that the well known ordinary and customary meaning of the term "metadata" is data for describing other data. The Appellant reinforced this definition by defining the term "metadata objects" as being data for describing data objects. See, U.S. Patent Application Serial No. 09/843,068 at page 1, lines 2 and 3. The Appellant further respectfully asserts that the data illustrated in FIG. 1 of Microsoft Excel 1999 is not metadata as known in the art, but no more than data that can be described by metadata. Thus, Microsoft Excel 1999 can not be interpreted by Examiner Campbell as teaching "metadata objects", "metadata information" and "metadata directives" as recited in claims 1-18.

Other definitions under the well known ordinary and customary meaning of the term metadata include, for example:

"descriptive statistical information about the elements of a set of data"

- Encarta
- "data about data"
 - Dictionary.com
- "Metadata is data about data"
 - Wikipedia

"Information about data, or more specifically, the descriptive information provided in meta tags in an HTML or XML document header about that document."

- Interactive Glossary of Internet Terms

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 12 of 19

Thus, in light of the ordinary usage of the word, as well as Appellant's own definition of "metadata," the Examiner's attempt to define metadata in contrast to its accepted meaning cannot support a continued rejection of the claims.

Since the reference does not disclose each and every claimed element, the \$102(b) rejections are unsupported, and these claims should proceed to allowance.

B. MS Excel is not prior art

The MPEP is quite clear that a reference is a "printed publication" as required by §102(b) only "upon a satisfactory showing that such document has been disseminated or otherwise made available to the extent that person interested and ordinarily skilled in the subject matter or art, exercising reasonable diligence, can locate it." See MPEP 2128, In re Wyer, 655 F.2d 221 (CCPA 1981).

However, the "MS Excel" reference cited against this application is, or at least appears to be (i.e. "This product is licensed to JCampbell USPTO"), merely a printout of a screen shot of the Examiner's personal computer. The Examiner does not even allege that a single other person, much less one of ordinary skill in the art, has access to his personal computer at the PTO.

The Examiner's inclusion of the "About Microsoft Excel" window appears targeted to show that the program was available more than one year prior to the filing date of this application on April 26, 2001.

However, the copyright dates of a computer program are irrelevant to its status as a printed publication. Further, the screenshot illustrating the copyright dates does not show the allegedly anticipatory method in action, and therefore calls the anticipatory nature of the alleged reference into question.

While the Examiner may argue that he need not prove anyone actually looked at the document, he must show both that someone could have (i.e. see MPEP 2128.01) and the date that the publication is available as a reference. The Examiner has failed on both counts here. First, the Examiner has not alleged that his computer was available to the public prior to April 26, 2001. Second, the Examiner has not alleged any dates that the publications were available to the public.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 13 of 19

Additionally, there is a distinct difference between status as a printed publication under 35 U.S.C. and under copyright law. Specifically, 17 U.S.C. §102 states that "copyright protection subsists, in accordance with this title, in original works of authorship fixed in any tangible medium of expression, now known or later developed, from which they can be perceived, reproduced, or otherwise communicated, either directly or with the aid of a machine or device." Thus, the fact that a document claims copyright does not mean that the document has been disseminated or otherwise made available.

Furthermore, that a document claims copyright to a date more than one year prior to the instant filing date does not mean that a particular portion of the document was included in the copyrighted work at the time that the copyright notice was affixed. For example, the Examiner argues without evidentiary support that this version of MS Excel was "released in 1999." However, there is not a scintilla of evidence in the record that this printed publication existed more than one year prior to the filing of this application. Furthermore, that MS Excel was released in 1999 is irrelevant – the functionality that allegedly anticipates the instant claims would have had to be in the '1999' iteration of MS Excel. This fact alone renders the Examiner's §102(b) rejection unsupportable.

Since "MS Excel" does not qualify as prior art, the §102(b) rejections are unsupported, and these claims should proceed to allowance.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 14 of 19

SUMMARY

The Appellants respectfully submit that claims 1-18 fully satisfy the requirements of 35 U.S.C. §§102, 103 and 112. In view of the foregoing, favorable consideration and early passage to issue of the present application is respectfully requested.

Dated: April 28, 2005

Respectfully submitted, Richard D. Hoffman, et al.

CLAIMS APPENDIX

- A method for generating metadata objects, said method comprising:
 displaying a spreadsheet including metadata information therein; and
 providing a command to trigger a conversion of the spreadsheet into a comma
 separated value file.
- The method of claim 1, further comprising: converting the spreadsheet into the comma separated value file in response to an activation of the command; and

parsing the comma separated value file to thereby generate the metadata objects from the metadata information.

- 3. The method of claim 1, further comprising: Inputting the metadata information into the spreadsheet in response to a reception of the metadata information.
- A method for generating metadata objects, said method comprising:
 displaying a spreadsheet including metadata information and one or more
 metadata directives therein; and

providing a command to trigger a conversion of the spreadsheet into a comma separated value file.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 16 of 19

5. The method of claim 4, further comprising:

converting the spreadsheet into the comma separated value file in response to an activation of the command; and

parsing the comma separated value file in accordance with the one or more metadata directives to thereby generate the metadata objects from the metadata information.

6. The method of claim 4, further comprising:

inputting the metadata information into the spreadsheet in response to a reception of the metadata information; and

inputting the one or more metadata directives into the spreadsheet in response to a reception of the one or more metadata directives.

- 7. A computer for generating metadata objects, said computer comprising: means for displaying a spreadsheet including metadata information therein; and means for providing a command to trigger a conversion of the spreadsheet into a comma separated value file.
- 8. The computer of claim 7, further comprising:

means for converting the spreadsheet into the comma separated value file in response to an activation of the command; and

means for parsing the comma separated value file to thereby generate the metadata objects from the metadata information.

9. The computer of claim 7, further comprising:

means for inputting the metadata information into the spreadsheet in response to a reception of the metadata information.

Case No.: AUS920010138US1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 17 of 19

10. A computer for generating metadata objects, said computer comprising: means for displaying a spreadsheet including metadata information and one or more metadata directives therein; and

means for providing a command to trigger a conversion of the spreadsheet into a comma separated value file.

11. The computer of claim 10, further comprising:

means for converting the spreadsheet into the comma separated value file in response to an activation of the command; and

means for parsing the comma separated value file in accordance with the one or more metadata directives to thereby generate the metadata objects from the metadata information.

12. The computer of claim 10, further comprising:

means for inputting the metadata information into the spreadsheet in response to a reception of the metadata information; and

means for inputting the one or more metadata directives into the spreadsheet in response to a reception of the one or more metadata directives.

13. A computer program product in a computer readable medium for generating metadata objects, said computer program product comprising:

computer readable code for displaying a spreadsheet including metadata information therein; and

computer readable code for providing a command to trigger a conversion of the spreadsheet into a comma separated value file.

Case No.: AU\$920010138U\$1 (9000/25)

Serial No.: 09/843,068 Filed: April 26, 2001 Page 18 of 19

14. The computer program product of claim 13, further comprising: computer readable code for converting the spreadsheet into the comma separated value file in response to an activation of the command; and

computer readable code for parsing the comma separated value file to thereby generate the metadata objects from the metadata information.

- 15. The computer program product of claim 13, further comprising:
 computer readable code for inputting the metadata information into the spreadsheet in response to a reception of the metadata information.
- 16. A computer program product in a computer readable medium for generating metadata objects, said computer program product comprising:

computer readable code for displaying a spreadsheet including metadata information and one or more metadata directives therein; and

computer readable code for providing a command to trigger a conversion of the spreadsheet into a comma separated value file.

17. The computer program product of claim 16, further comprising: computer readable code for converting the spreadsheet into the comma separated value file in response to an activation of the command; and

computer readable code for parsing the comma separated value file in accordance with the one or more metadata directives to thereby generate the metadata objects from the metadata information.

18. The computer program product of claim 16, further comprising:

computer readable code for inputting the metadata information into the spreadsheet in response to a reception of the metadata information; and computer readable code for inputting the one or more metadata directives into the spreadsheet in response to a reception of the one or more metadata directives.
